

# Casterbridge to Stourhead (V1.1)

This update includes a few tweaks to the signalling, name boards for the stations and signal boxes and one or two new scenarios. Although fictitious, the route provides plenty of opportunity for interesting scenarios and lots of variations for main line running. I wanted to create a route which embodied lots of options for a variety of scenarios with both industrial and rural scenery. The route includes a mini version of Waterloo, flying/burrowing junctions, 3 other termini, 3 goods yards, an Oil Terminal and a busy Airport. There's a fair opportunity for trains to get some speed up. Depending on the route taken from end to end, a journey of up to 20 miles can be achieved. The route is also Quick Drive enabled so any stock can be run if required. I hope users will enjoy the variety of running it allows.

# Casterbridge to Stourhead Third Rail (V1.0)

Much time has passed and the route has been electrified in the usual southern railway manner. I wanted to see if I could make things a bit more busy trafficwise. As before, the route provides plenty of opportunity for interesting scenarios and lots of variations for main line running. There is a short additional single track branch loop to simplify turning goods trains away from Casterbridge otherwise it's the same route as before. Hopefully users will find lots of options to create a variety of scenarios through the industrial and rural scenery. As before the route includes a mini version of Waterloo, flying/burrowing junctions, 3 other termini, 3 goods yards, an Oil Terminal and a busy Airport. There's a fair opportunity for trains to get some speed up. Depending on the route taken from end to end, a journey of up to 20 miles can be achieved. I hope users will enjoy the variety of running it allows.

### **Required Assets for the routes:**
